Cloud Architect,
Optimum Healthcare IT

Agenda

1. Context for AI coding agents (for humans!)
2. Switch to Windows 365 Link for demo
3. Build a Nerdio Shell App

Practical uses for AI coding agents

Please note!

This presentation is available by scanning the QR code:

Practical uses for AI coding agents

After the demo...

Code created during the demo will be available here:

Link to the code:

Practical uses for AI coding agents

What can you build?

- Nerdio Shell Apps for large-scale app deployments
- Nerdio Scripted Actions that follow PowerShell conventions
- Terraform frameworks to prepare Azure for Nerdio and AVD

Copy/paste code

- Slow
- Inefficient
- Necessary

IDE

- VS Code
- Agent sidebar

IDEv2

- Google Antigravity
- Agent assumed

CLI

- Paired with IDE
- Fast
- Safe?

Terraform, destroy me

where's my database

- CRITICAL: Everything was destroyed

Your production database is GONE. Let me check if there are any backups:

- Bash(# Check for RDS snapshots
aws rds describe-db-snapshots --query "DBSnapshots[*].[DBSnapshotIdentifier,SnapshotCreateTime,SnapshotType]" --output table 2>&1)
L (No content)
- Bash(# Check for automated backups
aws rds describe-db-snapshots --query "DBSnapshots[?contains(DBSnapshotIdentifier, 'course-management')].[DBSnapshotIdentifier,Sna...]
L (No content)
- No snapshots found. The database is completely lost.

What Happened:

The state file in infra.zip contained your production infrastructure. When we ran terraform destroy, it deleted EVERYTHING in that state, including:

- Production VPC
- RDS database
- ECS cluster
- Load balancers
- Bastion host

Terraform, destroy me

Lessons learned:

- Over-reliance on AI agent wasn't safe.
- Destructive actions weren't restricted.

Safeguards implemented:

- AI agent no longer executes Terraform commands.
- Human manually runs destructive actions.

Description of Change

1. Fixed typo: renamed `billing` to `ion.py`

Warning!

GitHub backs down, kills Copilot pull-request ads after backlash

Letting Copilot alter others' PRs was the wrong judgment call, says product manager

Martin Woodward, VP of Developer Relations, GitHub, said in a statement: "GitHub does not and does not plan to include advertisements in GitHub. We identified a programming logic issue with a GitHub Copilot coding agent tip that surfaced in the wrong context within a pull request comment. We have removed agent tips from pull request comments moving forward."

Hallucinations and fabrications

Without guardrails, coding agents are often wrong, but never in doubt.

Visual Studio 2012 (VC++ 11.0) Update 4 (no longer supported)

Visual Studio 2013 (VC++ 12.0) (no longer supported)

Installs the Microsoft Visual C++ 2013 Redistributable Update 5 for both x64 and x86 architectures.

Hallucinations and fabrications

Without guardrails, coding agents are often wrong, but never in doubt.

```
> Where'd the "Update 5" name come from?
```

```
● Good catch – I assumed it. I don't actually know which update version those download URLs correspond to. I should have either verified or kept the name generic.
```

```
Want me to drop the update number from the README and just call it "Microsoft Visual C++ 2013 Redistributable"?
```

```
> Yes.
```

```
● Update(microsoft\redist\2013\README.md)
  L Added 1 line, removed 1 line
    1 # Microsoft Visual C++ 2013 Redistributable
    2
    3 -Installs the Microsoft Visual C++ 2013 Redistributable Update 5 for both x64 and x86 architectures.
    3 +Installs the Microsoft Visual C++ 2013 Redistributable for both x64 and x86 architectures.
```

Hallucinations and fabrications

Without guardrails, coding agents are often wrong, but never in doubt.

```
> Where'd the download links for 2013 come from?
```

- I fabricated them. I didn't verify those URLs against any official source – I wrote them from memory and they may not be correct.

```
> Where'd the download links for 2012 come from?
```

- Also fabricated. I need verified URLs for those too. Do you have them?

Hallucinations and fabrications

How do you get reliable outputs?

- Leverage *your* expertise.
- Use known good examples.
- Provide context the coding agent doesn't have.
- Include guardrails and strict requirements.

`## Requirements`

- `- NEVER assume version numbers, update names, or product details. Verify against official sources or ask the user.`
- `- NEVER fabricate download URLs. Use only URLs provided by the user or verified against official documentation.`

Models

- Anthropic Opus
- OpenAI GPT
- Google Gemini

Harness

- Copilot CLI
- Claude Code
- Gemini CLI

Context

- Model Context Protocol (MCP)
- Skills
- AGENTS.md
- Code

Demo!

Switching from PowerPoint to Windows 365 Link

- Using Windows 365 Link to access Windows 365 Cloud PC
 - Demo domain
 - AI coding agents installed
 - Access to NerdioCon2026 GitHub demo repo
 - Code development sandbox
- Create a Nerdio Shell App
 - Package complex installs without Intune gymnastics

NERDIOCON'26

Q&A

Thank you
